## PRODUCT DATA SHEET Hiltru®: Hiltru coupling floor system overview

### Size Hiltru coupling floor system overview

Article number	999999995
System components	7x floor element, 5x coupling piece, 5x ramp

## Specifications Hiltru coupling floor system overview

In many situations, the coupling floor system can be a practical and, compared to a traditionally made liquid-proof floor, an inexpensive solution. Floors in existing rooms, under roofs or as loading floors can be made impermeable by installing and connecting separate elements. By using special couplings, two or more floor elements guarantee a complete liquid-tight floor. The products shown can be used within the PGS 15 regulations.

- Zulassung: Übereinstimmungserklärung (ÜHP) gem. Bauregelliste A teil 1 Dibt, Berlin.
- Removable, high load-bearing galvanized grid floor.
- Draining trays, gratings and ramps made of galvanized steel (DIN 50976).
- Drip trays and coupling profiles made of 3 mm galvanized steel from steel S235JR.
- With the Cross Connector (optional), 4 drip trays can be fixed at the junction, easily with an Allen bolt.
- Tracks and corners made of anti-slip and galvanized bulb plate 5 mm S235JR.
- Skid plate
- Ramps and corners (optional) can be driven over with a forklift truck.
- The anchoring profiles supplied as standard allow the drip trays to be anchored securely to the ground.
- Simple placement/assembly and always expandable or adaptable.

- Skid plate
- Ramps and corners (optional) can be driven over with a forklift truck.
- The anchoring profiles supplied as standard allow the drip trays to be anchored securely to the ground.
- Simple placement/assembly and always expandable or adaptable.
